PROFESSIONAL SUMMARY

Full Stack Developer with 3+ years of experience building secure REST APIs, server-rendered Django interfaces and React.js / Angular / vanilla JavaScript (ES modules) front ends for Banking (Barclays) and Healthcare (DaVita) platforms. Strong in API-key, OAuth2 / OIDC and JWT authentication, ORM / SQL persistence, pytest / Jest testing, Docker-based delivery on AWS, CI/CD and Agile Scrum. Uses AI coding tools (Google Antigravity, Claude Code, Cursor) to speed up scaffolding, refactoring and test writing, always with human review. Creator of the live product MHADA Explore (245K+ monthly page views, 75K+ active users). **National Champion (AIR 1), Smart India Hackathon 2023**. Open to full-time Full-Stack roles across PAN India (remote / hybrid / relocation).

CORE TECHNICAL SKILLS

Languages	Python (3.9-3.12), JavaScript (ES6+ / ES Modules), TypeScript, SQL, HTML5, CSS3
Backend	Django (templates, views, ORM), Django REST Framework, Flask, FastAPI, Celery, Microservices, Hexagonal Architecture, gunicorn + nginx
Auth & APIs	REST APIs, Header / API-Key auth, OAuth2, OIDC login flows, JWT / SimpleJWT, RBAC, Swagger / OpenAPI, Postman
Frontend	Vanilla JavaScript (no bundler), React.js, Angular, Django templates, Bootstrap, Web Components, DOM APIs, Responsive UI
Databases	PostgreSQL, MySQL, Oracle, SQL Server, Redis
Cloud & DevOps	AWS (EC2, S3, IAM, RDS, CloudWatch), Docker, Kubernetes / Helm (exposure), Jenkins, GitLab CI, GitHub Actions, CI/CD
Testing & Practices	pytest, Jest, Unit / Integration Testing, TDD, Design Patterns, OOP, Code Reviews, Agile / Scrum, SDLC
AI-Assisted Dev	Google Antigravity, Claude Code, Cursor, GitHub Copilot, Windsurf, Prompt Engineering, LLM API Integration
Tools	Git, GitHub / GitLab, JIRA, VS Code, PyCharm, Linux

PROFESSIONAL EXPERIENCE

Software Developer | Pentagram Infotech Pvt. Ltd., Hyderabad

May 2023 - Present

BCPS - Banking Corporate Payment System (Client: Barclays)

Python 3.11, Django, DRF, React.js, Angular, TypeScript, Vanilla JS, MySQL, OAuth2, JWT, pytest, Docker, AWS

- Built Django / DRF services and UI flows for core corporate banking: deposits, withdrawals, bulk payroll disbursements, bill payments, demand drafts and appointment scheduling.
- Designed secure, scalable REST APIs for transaction processing and account management; integrated downstream services using header / API-key and token authentication with consistent error handling.
- Implemented Django authentication with OAuth2 and JWT, permission-gated views and role-based (maker / checker) access; used `transaction.atomic` so failed operations roll back cleanly.
- Delivered responsive forms, detail pages and admin screens in React.js, Angular, TypeScript and ES6+ JavaScript; added audit trail and event journaling for statutory traceability.
- Improved release stability with pytest unit tests, TDD and peer reviews; automated build and deployment (Git, GitLab CI, Jenkins, Docker, gunicorn + nginx on AWS) in an Agile Scrum team.

T2orem - Banking Trading & Audit Management System

Python, Django, DRF, Celery, Hexagonal Architecture, Oracle, PostgreSQL, React.js, Angular, Django Templates, Jest, pytest, Jenkins

- Designed and delivered a Hexagonal (ports and adapters) platform for share transactions, positions, audit trails, user provisioning and profit / loss tracking, improving scalability and maintainability.
- Built secure REST APIs with Oracle and PostgreSQL persistence via Django ORM; added audit journaling and automated email alerts through Celery.
- Developed workflow dashboards and data-grid UI modules in React.js, Angular and server-rendered Django templates; set up CI/CD with Git and Jenkins and tracked releases in JIRA.

DaVita FALCON - Electronic Health Records (EHR) System

Python, Django, DRF, HIPAA, React.js, Angular, TypeScript, MySQL, AWS, Docker, pytest, Jenkins

- Developed a cloud-enabled, HIPAA-compliant EHR platform on AWS for DaVita Healthcare covering patient management, clinical workflows and secure medical record handling.
- Built secure REST APIs for patient registration, appointment scheduling and laboratory data exchange; delivered permission-gated clinician, staff and patient portals.
- Partnered with domain experts and QA on unit and integration testing in pytest for reliability and compliance; deployed via Git, Docker, Jenkins with CloudWatch monitoring.

FLAGSHIP & LIVE PRODUCTION PROJECTS

MHADA Explore - Pune & PCMC Housing Lottery Analytics

[mhadaexplore.app](#)

Python (Flask), React.js, Leaflet.js, Cloudflare CDN, REST APIs, In-Memory Caching

- Architected and launched a live citizen platform indexing 168 MHADA schemes and 4,462 flats; serves **245,000+ monthly page views** and **75,000+ active users** with <45ms edge TTFB under lottery-deadline traffic spikes.
- Built a Flask REST API with pre-indexed in-memory caching, multi-criteria filtering and a 15-model statutory reservation quota engine, plus MahaRERA-verified floor plans and an EMD / stamp duty / EMI cost calculator.
- Created a bilingual (Marathi / English), mobile-first React UI with Leaflet.js maps; automated pipelines that convert lottery PDF gazettes into normalized relational data.

E-Zero Core - E-Waste Logistics & Predictive Analytics (AIR 1, SIH 2023)

National Champion

Python 3.11+, Django 5.0+ (8 apps), Pure Python ML, Leaflet.js, REST APIs

- Unified 8 Django apps into an enterprise-grade circular-economy platform, selected the top solution nationally among thousands of teams.
- Engineered a zero-dependency pure Python ML engine (OLS linear regression, covariance, R-squared) to forecast e-waste influx, and a live Gold / Copper / Aluminum yield valuation engine against USD commodity rates.
- Built chain-of-custody reverse logistics with 2-hour dispatch scheduling, a status state machine and Leaflet.js facility geolocation.

CivicMind - Community Decision Intelligence Platform

Multi-Agent AI

Python, FastAPI, Google Vertex AI, Gemini 2.5, BigQuery, Vanilla JS, Chart.js

- Built an AI platform with 4 collaborating autonomous agents (Environment, Mobility, Citizen Sentiment, Recommendation) that fuse IoT feeds and predictive ML into prioritized, cost-aware action plans.
- Delivered an async FastAPI core, explainable-AI driver attribution, a digital-twin policy simulator and a RAG-based natural-language assistant, with a zero-framework ES6 glassmorphic SPA.

College Alumni Management Portal - Dr. VVP College of Engineering (SPPU)

Officially Adopted

Python 3.12, Django 5.2, DRF, SimpleJWT, PostgreSQL, Vanilla JS (ES Modules)

- Production campus platform for alumni records, 1-on-1 mentorship booking, job referrals and placement analytics, backed by 19 normalized PostgreSQL tables and 4-role RBAC (Admin, Alumni, Student, Faculty).
- Built aggregated API views (HomepageAPIView, AlumniDashboardAPIView) merging 5-8 queriesets into one JSON response, **cutting first dashboard paint by 68%**.

KEY ACHIEVEMENTS

- **Winner, AIR 1 - Smart India Hackathon 2023:** National Champion for the AI-powered E-Waste Management System (E-Zero Core).
- **Creator & Lead Architect of MHADA Explore:** live public platform with 245,000+ monthly page views and 75,000+ active users across Maharashtra.
- **Campus-wide adoption:** Alumni Management Portal officially adopted by Dr. VVP College of Engineering.

EDUCATION

Bachelor of Engineering (B.E.), Electronics & Telecommunication

2019 - 2023

Savitribai Phule Pune University (SPPU) | Dr. Vithalrao Vikhe Patil College of Engineering | First Class
